

Cyber Security

What have I achieved in this field?

SECURE BASH

A SECURITY SOFTWARE MADE BY A COLLEGE STUDENT

What is Cyber Security?

Cyber Security

```
graph TD; CS[Cyber Security] --> OS[Offensive Security]; CS --> DS[Defensive Security]; CS --> O[Others..]; OS --> O1[Ethical Hacking/ Penetration Testing]; DS --> D1[Incident Response]; DS --> D2[Security Operations]; O --> O1a[Malware Analysis]; O --> O2a[Digital Forensics];
```

Offensive Security

- Ethical Hacking/ Penetration Testing

Defensive Security

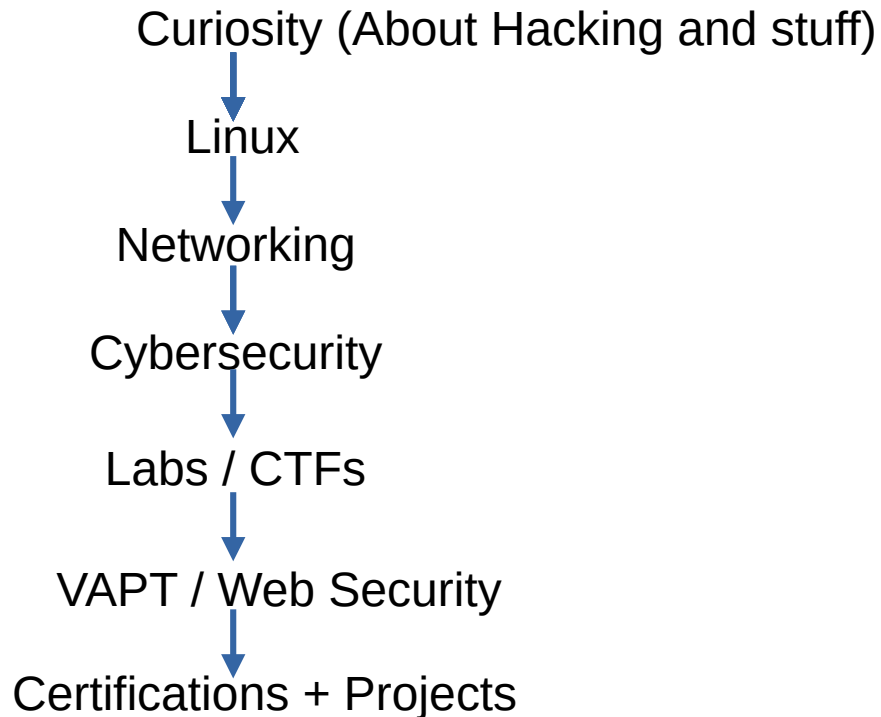

- Incident Response
- Security Operations

Others..

- Malware Analysis
- Digital Forensics

How I got into hacking?

- Hacking is damn cool, right?

But I used to jump between topics..

I was confused and overwhelmed...
So you don't have to!!!

What I thought

- Kali Linux = hacking
- Learn tools first
- Experts know everything
- I'll learn quickly
- Certification = Expertise

What I Learned

- Kali is just a tool
- Learn fundamentals first
- Experts know how to research
- Progress can be painfully slow
- Practical skills matter

Mistakes I made & Problems I faced

- **Jumped between topics**

- **Watched too many tutorials**

Watching someone hack $\neq$ being able to hack

- **Got frustrated when stuck**

Sometimes one problem could take hours

- **Compared myself with others**

Seeing people doing advanced CTFs made me feel behind

What actually helped me?

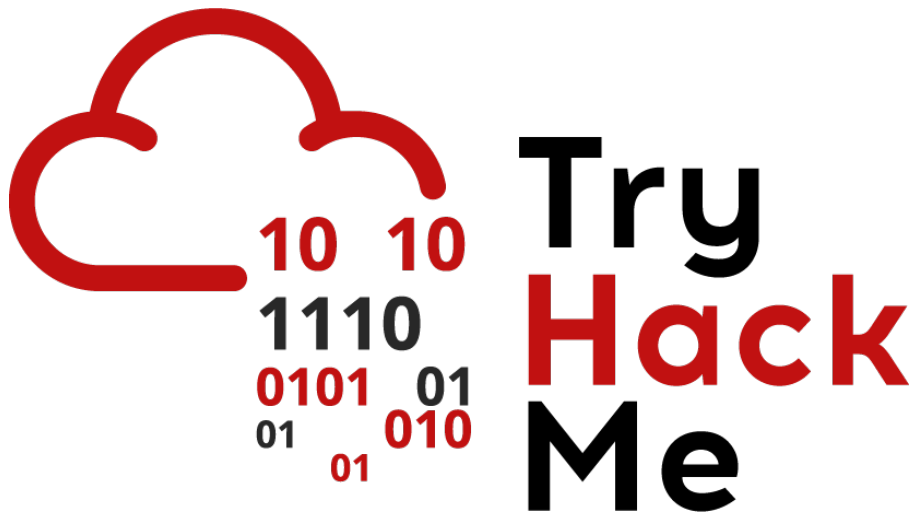

1. Understanding fundamentals
2. Learning from mistakes

Getting stuck → Researching → Trying again

One Big Statement

Practice > Watching

Where to start?
